

Geography

Do you want to learn about local environments?

Do you want to learn about environmental management?

This subject is divided into Geographies of Human Wellbeing and Environmental Change and Management.

The initial focus of the Geography course will move towards developing a Geographical Inquiry of a local environment system (coastal, rural, wetland etc). Students identify methods of environmental management and discuss the successes and challenges of management strategies. From a local to a global focus, students engage with collecting, organising and representing data through written and visual methods. They make sustainable recommendations to achieve equitable and socially responsible futures.

Assessment

Assessments are continuous and varied in nature. There is a variety of assessment pieces that focus on inquiry, analysing data and fieldwork. These may include geographical inquiry, data analysis, presentations, fieldwork report and an exam.

Subject Length

1 term
