

Universal Reasoning – Science

Do you want to learn about living organisms?

Do you want to investigate science affects modern life?

Students are introduced to a laboratory environment and will carry out experiments with materials readily available at home. They learn how to safely design and conduct fair tests, then make written reports on their findings. Classroom learning, assignments and projects include learning units on living organisms, simple chemistry, the rock cycle and different forms of energy. Students have the opportunity to investigate how science affects modern life and learn about how scientists share and develop new ideas.

Assessment

Experiments
Basic Scientific Reports
Research Projects
Tests

Subject Length

Full year
