

Chemistry

How is the world chemically constructed?

Do you know what makes up the world around us? Do you want too?

Within this course students explore atoms and the important components in the world today. Students explore the combinations of different types of atoms and how they can form natural and synthetic materials focusing on the overall question of, what makes up the world around us?

SACE Credits

10 credits

Assessment

Investigation folio

Skills and application tasks

Subject Length

1 semester

Prerequisites

N/A

Additional Information

Some scientific calculators will be made available by the teachers.
